Sukashi-Type A
"2-Kaicho"

Block Copy

Through the light (24"x 36")

On Black Background (24"x 36")

Wet parchment in a vat

Type A watermark is called the shaded watermark. A shaded watermark incorporates tonal depth and creates a grey-scale image. Instead of using a wire covering for the dandy sheet, the shaded watermark is created by areas of relief on the sheet's own surface. A watermark is very useful in the examination of parchment because it can be used for dating, identifying sizes, mill trademarks and locations, and the quality of parchment.

Pattern Example
- Leaves

Pattern Example
- Cranes

Sukashi-Type B
"Filter"

Detail For Artwork

Wet parchment in a vat

This embossing is transferred to the natural fibres, compressing and reducing their thickness in that area. Because the patterned portion of the page is thinner, it transmits more light through and therefore has a lighter appearance than the surrounding paper. If these lines are distinct and parallel, and/or there is no watermark, then the parchment is termed laid parchment. This method is called "filtered"

Design Example - Roses
